***Response to Amendment***

1. This office action is in response to applicant's amendment received on 6/14/05. Claims 1, 2, 4-5 and 11 have been amended. Claims 13-15 and 20 have been canceled per 10/26/04 response. Claims 1, 2, 4 - 12, and 16 – 19 are pending on this application. Claims 1, 13 and 16 are independent claims.

***Claim Objections***

2. Claims 3 and 19 objected to under 37 CFR 1.75(c), as being of improper dependent form for failing to further limit the subject matter of a previous claim. Applicant is required to cancel the claim(s), or amend the claim(s) to place the claim(s) in proper dependent form, or rewrite the claim(s) in independent form.

Claim 19 is drawn to a "storage medium" and claim 16 is drawn to a "method implemented within a memory driver".

Claim 3 should be canceled since claim 1 was amended to include the limitations of claim 3; hence "withdrawn" claim 3 fails to further limit 6/9/2005 amended claim 1.

***Claim Rejections - 35 USC § 102***

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

**Claims 16 – 19 are rejected under 35 U.S.C. 102(b) as being anticipated by Ooishi U.S. patent No. 6,175,532 B1 – filed: May 21, 1999.**

**Regarding independent claim 16**, Fig. 64 [1602] of Ooishi discloses method implemented within a memory driver (Fig. 54[1602]) comprising: receiving at least a subset (Fig. 64 [A1 – A8]) of an address for promotion to a memory (Fig. 54 [1600]); and selectively replacing (Fig. 64 [1616]) at least the subset of the received address with a process identifier (Fig. 64 [1616]) if it is determined that the subset of the received addresses is composed of zeroes (Col. 58 lines 45 – 50).

**Regarding dependent claim 17**, Fig. 55C of Ooishi further comprising: analyzing the received subset (A3, A4) of the address (A1, A2, A3, A4) to determine whether the subset of composed of zeroes (first row of A3, A4 in Fig. 55C) and, if so, to provide an indication (Fig. 64 [Coincide]) to a multiplexing element (Fig. 64 [1616]) to replace the received subset of the address with the process identifier (Fig. 64 [1616]).

**Regarding dependent claim 18**, Ooishi discloses a method implemented within a memory driver (Fig. 64) according to claim 18, further comprising: asserting either the received address [1614], or a modified version [1612] thereof based, at least in part, on whether the received subset of the address is composed of zeroes (Col. 58 lines 32 – 34).

**Regarding dependent claim 19**, Fig. 1 of Ooishi discloses a storage medium comprising content which, when executed by an accessing machine, causes the machine to generate a memory driver according to claim 16 (Col. 6 lines 35 – 44).

***Allowable Subject Matter***

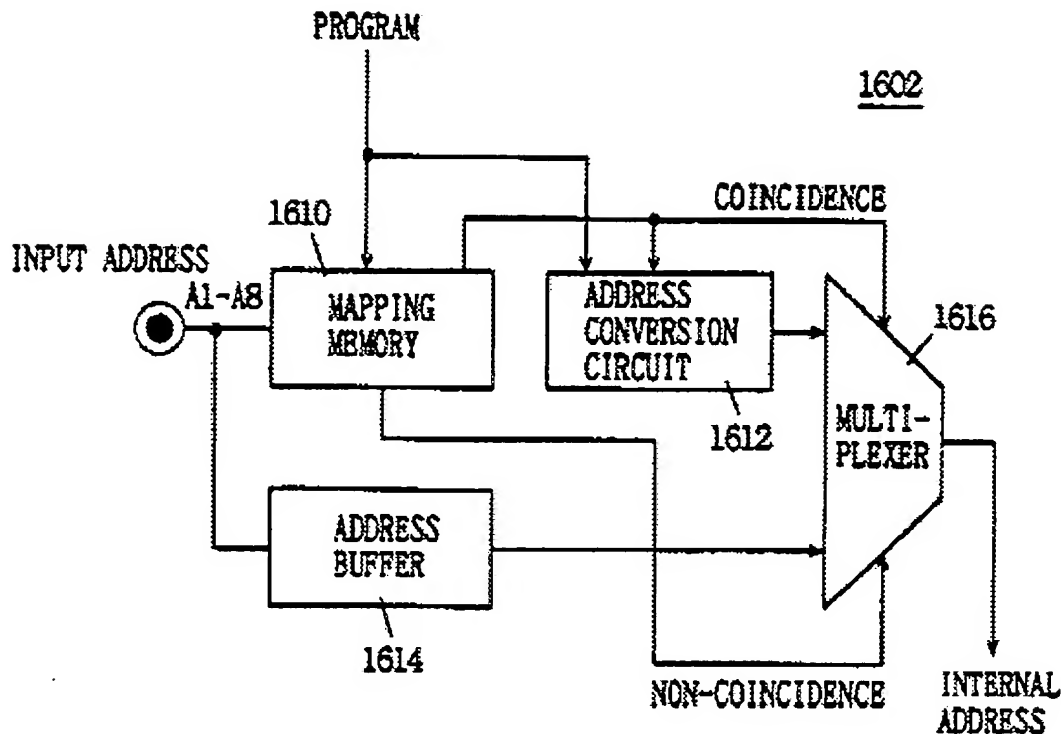

4. Claims 1, 2, and 4 – 12 are allowed.
5. The following is an examiner's statement of reasons for allowance:

**With respect to claim 1**, in addition to other elements in the respective claim, the prior art fails to teach or suggest "a pulse generator element, to receive a clock signal and produce at least two reference signals, overlapping yet offset from one another in time; and one or more driver elements, coupled to the multiplexing element and responsive to the pulse generator element, to receive content promoted from the multiplexing element during a precharge phase the reference signals, and to assert the content received from the multiplexer to the memory during a discharge phase of the reference signals".

***Response to Arguments***

6. Applicant's arguments filed 6/14/05 have been fully considered but they are not persuasive.
7. Under remarks, on page 9, with respect to claim 16, applicant argued that applicant is unable to locate any reference to use of a process identifier (PID) within the Ooishi reference. Examiner respectfully disagrees from the following:

FIG. 64

The Multiplexer [1616] of Fig. 64 of Ooishi may be construed as a process identifier (PID) because it has to identify what type of selection input such that "coincidence" or "non-coincidence" to select the output of program conversion address or address buffer. Therefore, previous office action applied to this as a final rejection.

### **Conclusion**

8. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP

§ 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
